Fast Imaging with Sparsity and Rank Constraints

Professor Zhi-Pei Liang

University of Illinois at Urbana-Champaign, USA

Abstract

Conventional imaging methods are based on Shannon sampling theory. As such, the number of Nyquist samples (or measurements) grows exponentially as the physical dimension of the underlying imaging problem increases (the so-called curse of dimensionality), rendering it difficult to achieve high resolution for high-dimensional imaging. Sub-Nyquist sampling is possible for sparse and/or partially separable signals and is providing a powerful way to speed up various imaging experiments. This talk will provide an overview of recent sparse sampling methods based on compressed sensing theory and partial separable function theory. An emphasis will be placed on discussing the issues of image reconstruction from sub-Nyquist data with sparsity and rank constraints and demonstrating their potential applications.

Biography

Professor Zhi-Pei Liang received his Ph.D. degree in Biomedical Engineering from Case Western Reserve University in 1989. He subsequently joined the University of Illinois at Urbana-Champaign (UIUC), first as a postdoctoral fellow (advisor: Paul C. Lauterbur), and then as a faculty member in the Electrical and Computer Engineering Department. He is currently Professor of Electrical and Computer Engineering and Co-chair of the Integrative Imaging Theme of the Beckman Institute for Advanced Science and Technology. He also has joint appointments in the Coordinated Science Laboratory, the Computational Biophysics Program, and the Department of Bioengineering, all at UIUC.

Dr. Liang's research interests include magnetic resonance imaging, superresolution image reconstruction using a priori constraints, statistical and learning-based methods for biomedical image analysis, and their application to functional brain mapping, cancer imaging, and cardiac imaging.

Dr. Liang is a recipient of the Sylvia Sorkin Greenfield Best Paper Award of the Medical Physics Journal (1990), an NSF Research Initiation Award (1994) and CAREER Award (1995), and an IEEE-EMBS Early Career Achievement Award (1999). He was named Fellow of the UIUC Center for Advanced Study (1997), Henry Magnuski Scholar (1999-2001), and University Scholar (2001-2004). He has appeared several times in the Daily Illini List of Excellent Teachers (1998-2000; 2005; 2007, 2008), was selected as a Distinguished Lecturer of IEEE-EMBS (2002-2005), and received the Ronald W. Pratt Faculty Outstanding Teaching Award (2005), and the Engineering Council Award for Excellence in Advising (2006, 2007, 2008). Dr. Liang was elected as Vice President (2006-2009), President-elect (2010), and President (2011-2012) of IEEE-EMBS. Dr. Liang is a Fellow of American Institute for Medical and Biological Engineering (2005), a Fellow of IEEE (2006), and a Fellow of International Society of Magnetic Resonance in Medicine (2010).

Invited Lecture 2

Augmented and Virtual Reality for Surgery Guidance: The IRCAD Point of View

Dr. Stephane Nicolau
IRCAD, TAIWAN

Abstract

In this presentation, we will present in a first part the activity of the IRCAD France center (Research Center against Abdominal and Digestive Cancer) along the last 12 years. In a second part, we will focus on the recent development of a new IRCAD center in Taiwan.

We will firstly review the main research works performed in the field of Virtual and Augmented Reality, then we will detail the problems we have encountered whilst trying to apply prototype technologies in the operating room. We will mainly share our experience on deformation issues. These experiments led us to revise our approach and think differently about the help that Augmented Reality can bring intra-operatively.

The second part of the presentation will be devoted to the new IRCAD center that has been built in Taiwan 2 years ago, and which has set up a medical imaging research team last year. I will firstly explain the purpose of this center in Taiwan and how the collaboration with the French center is performed thanks to efficient collaborative tools. Secondly, I will describe the works that have been performed during the first year on Ultrasound Simulation and marker tracking accuracy. Finally, I will quickly present the future projects we plan to work on.

Biography

Stephane Nicolau was born on 25th January 1978. In 2000, he obtained his engineer diploma of the Ecole Nationale Supérieure de Physique de Strasbourg (ENSPS). He then furthered his academic studies and made a PhD at INRIA Sophia-Antipolis under the supervision of Nicholas Ayache, head of the ASCLEPIOS team (former EPIDAURE). He obtained his PhD in 2004 and joined the Virtual Reality team of the Institut de Recherche contre les Cancers de l'Appareil Digestif in Strasbourg (IRCAD) as a researcher. In 2009, he becomes in IRCAD TAIWAN the leader of the new research team in medical imaging. His main fields of interest include medical augmented reality, medical image processing, 3D modelling of anatomical deformations, calibration of vision systems and validation of medical guidance systems.
